

Industry Leaders Set to Meet to Map the Next Step for the Reman Industry

With the government looking to expand the recycling industry and pursue a circular economy, it has announced a second batch of reman pilot schemes which is allowing the Chinese reman industry to flourish.

The 5th China International Remanufacturing Summit 2015 is being held by Duxes next March 12-13 in Beijing. This event will set out to explore these new developments and provide insights into the latest progress in reman technology and compare advances in remanufacturing at home and abroad in relation to governmental policies, technical standards, market acceptance and more.

As well as getting an assessment of the current state of the industry including insights from experts and a look towards the future of the industry, attendees will have the opportunity to improve their understanding of modern developments across various industries such as auto, construction machinery, machine tool and IT equipment.

For those who are currently considering entering the market, the summit will tackle issues such as the legal barriers such as issues surrounding IPR, authorization of reman pilot companies, labeling of reman products, and the relationship between OEs and remanufacturers.

As well as formal presentations, the 5th China International Remanufacturing Summit 2015 will allow attendees the opportunity to take part in open forum discussions which are certain to produce some unexpected new ideas from presenters and delegates. There will be plenty of opportunities for networking, bringing together hitherto unrelated parties in a field that is dependent on innovative partnerships to take the next step in development.
