

SMi is proud to announce that **Steve Epstein**, Distinguished Engineer at **Cisco**, has joined the expert line up of speakers at the 5th annual **European Smart Grid Cyber Security** conference taking place on 9th - 10th March 2015 in London, UK.

His talk entitled *Securing the Automatic Metering Infrastructure – Removing Piracy*, will describe end to end AMI architecture, analyse the possible vulnerabilities and significant threats that jeopardize the meter, concentrator and headend and list of security solutions that are required to mediate each threat. His presentation will provide a unique perspective into smart meters and cyber security.

This event will provide attendees with the opportunity to join this ground-breaking conference that will highlight and identify vulnerabilities in smart grid cyber security and demonstrate how to classify cyber-attacks with real life case scenarios from simulated and non-simulated attacks on smart grid.

Key Reasons to Attend:

- Learn how real-time information can make smart grid more efficient
- Discuss how utilities - on a pan-European scale - can improve a stronger security
- Explore intelligent financial investment
- Predict how smart grid & the green energy industry can tackle cyber-attacks
- Explore certification projects and test penetration

Key Speakers Include:

- Michael John, Senior Security Consultant, European Network for Cyber Security
- Carmine Rizzo, Technical Officer, European Telecommunications Standards Institute
- Toto Zammtaro, Senior Advisor, Intellium Ltd.
- Mauriche Kroos, Security Officer, Enexis B.V.
- Dieter Sarrazyn, Senior Manager, PwC
- Konstantinos Moulinos, Expert in Network & Information Security, European Network and Information Security Agency
- Jose Reynaldo Formigoni Filho, Information Security Technical Manager, CPqD
