

Adaptive Designs in Clinical Trials

18th April to 19th April 2016, Holiday Inn Regents Park, London, United Kingdom

The 8th annual Adaptive Designs in Clinical Trials conference is designed to highlight an array of topics, including adaptive designs within the context of a development programme, Bayesian analysis in adaptive design, biomarker-driven trials, regulatory issues associated with adaptive design, and more.

A series of practical case studies, interactive roundtables and panel discussion facilitated by leading industry experts will provide executives with useful tools and best practices to:

- Explore the use of adaptive design methods in clinical trials
- Adapt clinical development for immunotherapies in oncology
- Evaluate adaptive designs and Bayesian statistic
- Improve covariant adaptive designs
- Seamless Phase I/II Dose Finding Designs with Efficacy and Safety Endpoints
