

## **Airborne ISR**

26<sup>th</sup> – 27<sup>th</sup> October 2016, London, UK

[www.airborne-isr.net/inderscience](http://www.airborne-isr.net/inderscience)

In today's complex and ever changing operational environment, the demand for increased situational awareness continues to grow. As a decisive and indispensable tool, air based ISTAR is increasingly relied upon to deliver this capability, allowing commanders to understand the situation on the ground and act accordingly.

Covering direction, collection, process and dissemination, Airborne ISR aims to thoroughly analyse the intelligence chain and deliberate best practice for the enhancement of ISTAR capability. Drawing on respective nations ISTAR structure, operational feedback and training, to explore the doctrine necessary to develop this vital asset.

Importantly, the conference will also benefit from the guidance of technical leaders from research and industry, whose insight into the latest platforms, systems and sub-systems will provide greater awareness of existing and future capability.
