

COPD: Novel Therapeutics and Management Strategies

19th October to 20th October 2016,

London, United Kingdom

SMi proudly presents the 8th annual COPD conference in London, 2016!

This event is about the developments made in the field of COPD.

COPD accounts for a substantial number of deaths in Great Britain: it has consistently given rise to between 25,000 and 30,000 deaths each year over the last 25 years*

Chronic and with a progressive worsening characteristic, COPD could present huge problems in the developed world with the increase in opportunistic infections and long-term infections, especially it is non-curable. As such, prevention, early diagnosis and patient monitoring are the only means to tame the disease.

Development of COPD has been slow despite the increase in cases. The 8th annual COPD conference will be dissecting the core issues and explore alternatives to accelerate treatment development!

Why you should attend?

- Gain insight into formulation developments and the manufacturing of dry powder inhalation products
- Evaluate COPD and comorbidities
- Review the challenges in clinical trial designs and in drug development
- Learn about "first in class" inhaled drugs for the treatment of COPD and cystic fibrosis
- Explore recent advances made in COPD biomarkers
