

Future Helicopter Technology

26th October to 27th October 2016, Prague, Czech Republic

This, the 3rd event in this series, the Helicopter Technology conferences are revered as the highest level meeting for rotary fleet commanders from the most forward thinking military nations. Unlike other events, this conference is focused on effective strategies for procuring and upgrading multipurpose helicopter equipment and technology whilst ensuring standardisation and interoperability between defence forces.

Future Helicopter Technology 2016 will continue to break the mould and create an event that will assist the learning and development of Helicopter Programme Managers and practitioners through briefings, panel sessions and focused discussion groups. Unlike other events, we strive to deliver real insight and learning experiences through the expertly selected speakers, all who are recommended through our extensive research and consultation that is carried out across the industry.

At Future Helicopter Technology 2016 there are no attendees, only participants, all integrating ideas and sharing experiences so everyone can return to their rotary projects better equipped to enhance future strategies and procurement plans.

Whether you want to hear from leading Rotary OEMS, system integrators, niche component manufacturers, technical engineers, chief scientists or helicopter programme managers, Future Helicopter Technology 2016 is the only place you will return to your office with a set of strategies and solutions, not only presentation slides and business cards.

The expert speaker panel includes: Czech Armed Forces, Czech MoD, GS CZE, Slovenian Air Force, Slovak Air Force, NAHEMA, Polish Armed Forces, French Air Force, Belgium Defence Force, German Army, UKCeB and UK MoD.
