

## 10th Edition European Electricity Ancillary and Balancing Forum

25-26 September 2017

Barcelona, Spain

This **marcus evans** event will enable TSOs, DSOs and regulators to discuss the practical challenges involved in implementing the new regulatory developments including the network code and balancing guidelines, and how cooperation between firms can help with this. This event will also look at recent developments in demand response and flexibility as well as grid storage solutions, and how renewable energy systems can be used efficiently to deal with the ever-present issue of their lack of reliability. By discussing the key issues of today and preparing for the future, individual firms, as well as the industry as a whole, will be able to proceed in the knowledge that everyone is moving forward together.

Attending this premier **marcus evans** conference will enable you to:

- **Determine** what the strategies need to be in response to the latest regulatory expectations, such as the balancing guidelines, and hear what others have planned so far
- **Discover** the latest developments in demand response and flexibility
- **Understand** the state of play with grid storage: What can be done versus what is practical to do now
- **Benchmark** the impact of renewables on ancillary services and grid balancing across the continent

Special offers for Inderscience Publishers members/readers using code OG323-IP when registering for this conference

- 2 day conference: -£200
- 2 day conference & 1 workshop: -£250
- 2 day conference & 2 workshops: -£350

(Not for solution providers and consultants)
