

What The Experts Say About IJOGCT

"I am happy to see the establishment of this new journal that will provide an outlet for results of new research and applications in all areas of hydrocarbon and coal discovery, refinement and supply."

Prof. Frits Agterberg, Emeritus Scientist, Geological Survey of Canada ; Adjunct Professor, University of Ottawa , Canada

"It is very epoch-making that fossil energies producing countries and people publish I J Oil, Gas and Coal Technology to contribute the world through their science and technology intelligence. It is my great honour to join the editorial board of the journal to help keep its high quality and world wide reputation."

Prof. Isao Mochida, Kyushu University , Japan

"Fossil fuels represent one of the greatest natural resources on the planet, second only to man's ingenuity. A multidisciplinary journal devoted exclusively to fossil fuels, refining and petrochemical research is long overdue, owing to the significance and substantial impact fossil fuels play in our modern civilization and contribute to our standard of living. IJOGCT aims to be a leading journal in the multidisciplinary aspects of fossil fuels research and development."

Prof. Mark Kaiser, Director, Research and Development, Center for Energy Studies, Louisiana State University , USA

"More sustainable use of our resources of oil, gas and coal will be a high priority for research and development in the coming years. Introduction of IJOGCT is therefore very timely, and this new journal has great potential in promoting and championing research addressing the major challenge of our common energy future."

Professor Peter Nelson, Head, Graduate School of the Environment, CRC for Coal in Sustainable Development, Macquarie University , Australia
