**Biographical notes:** Luís Moniz Pereira is a Doctor Honoris Causa by TU Dresden, an ECCAI Fellow, a Professor of Computer Science at Universidade Nova de Lisboa and the Director (1993–2008) of its AI Centre. He is the Founding President of the Portuguese AI Association and was a Founding Member of the Editorial Boards of *J. Logic Programming*, *J. Automated Reasoning*, *New Generation Computing*, *Theory and Practice of Logic Programming*, *J. Universal Computer Science*, *J. Applied Logic*, *J. Reasoning-Based Intelligent Systems* (Advisory-Editor) and is an Associate Editor for AI of the ACM Computing Surveys. His research interests centre on knowledge representation and reasoning and cognitive science.

José Neves is a Full Professor at Departamento de Informática of Universidade do Minho. He received his PhD from University of Heriott-Watt in Edinburgh, Scotland in 1984.

José Machado is an Assistant Professor at the Departamento de Informática of Universidade do Minho. He received his PhD from University of Minho in 2002. His research interests span the field of knowledge representation, multi-agent systems, decision support systems, ambient intelligence and medical informatics.

Manuel Santos is an Assistant Professor at the Departamento de Informática of Universidade do Minho. He received his PhD from the University of Minho in 2000. His research interests span the fields of distributed AI, multi-agent systems, genetic-based classification systems and logic programming.

---

This is the first part of a two-part special issue of the *International Journal of Reasoning-based Intelligent System* that puts together original and extended versions of selected papers arising from *13th Portuguese International Conference on Artificial Intelligence*, EPIA 2007, held December 2007 in the ancient city of Guimarães, in the north of Portugal. The main conference proceedings were published as volume 4874 of the Springer LNAI series.

The selection of extended versions resulted from a second peer review round of *IJRIS* scope submissions, following high quality and appropriateness criteria. It collects important contributions in a variety of topics of artificial intelligence and intelligent systems engineering that touch on foundational, development and application issues.

The contributing authors come from Brazil, France, Germany, India, Indonesia, Mexico, Portugal, Slovakia, Spain and USA, thereby exhibiting the international diversity of scientific research in reasoning-based intelligent systems.
