Nowadays, a great attention in the material field is focused on progressive micro- and nanomaterials. By this special issue of *International Journal of Materials and Product Technology*, we would like to contribute to the evaluation of production methods, evaluation of microstructure as well as characteristics of physical and mechanical properties of the new materials which predict potential possibilities of their utilising.

I am very grateful to all the authors and reviewers for their contributions and to Dr. M.A. Dorgham, the Editor-in-Chief, to his support of this special issue.
