He received his Doctoral degree in Industrial Engineering from the Purdue University in 2003. His research includes logistics, supply-chain management, and applied ICT to improve organisational learning and development.

---

The special issue for *International Journal of Innovation and Learning* represents the attempt to highlight the importance of intellectual capital to the development of an organisation or an enterprise today. Managing intellectual capital deals with how well human capital and innovation contribute to organisational competitiveness and long-term business success. The term intellectual capital also reflects the enterprise's ability to learn and adapt to new business environment which has become more globalised over the past decade.

This special issue is based on the MakeLearn/TIIM Conference which took place in Bari, Italy during May 27–29, 2015. The main theme of the conference was managing intellectual capital and innovation for sustainable and inclusive society.
