### Introduction

This special issue of *International Journal of Sustainable Agricultural Management Informatics (IJSAMI)* includes the extended versions of the selected good quality papers from National Conference on Applications of Computing in Engineering, Sciences and Management (NCACESM-2019).

The main objective of NCACESM-2019 is to present the research from different areas of science, technology and management. This conference provides a platform for researchers and scientists across the world to exchange and share their experiences and research results about all aspects of information technology. This conference also provides an opportunity to interact and establish professional relations for future collaboration. The conference aims to promote innovations and work of researchers, engineers, students and scientists from across the country on advancement in electronics, computer systems, sciences and management.

The conference received exactly 100 papers from the scientists, academicians and researchers. The authors of the 11 selected papers were asked to submit the revised conference paper for the special issue of the IJSAMI by making suitable changes as a customary process of publication rules. The revised papers were again submitted to at least 2–3 reviewers for the normal journal-style review process and finally five papers were selected after extensive review/revision process. We appreciate the willingness of the Professor Basil Manos (Editor) and Dr. Kamaljit Singh Saini (Handling Editor) to help in organising this special issue. The Guest Editors Dr. Amanpreet Kaur and Dr. Amit Jain had ensured that the peer review process is fair and timely by the external and independent reviewers selected from different domains according to the submitted papers.
