He is a proliferate scholar with publication areas including, foreign ownership, effect of the global financial crisis on the foreign direct investment, monetary policies on the financial market risk, managerial behaviour and published books and 33 papers in journals.

In recent years, global society has faced a range of technical, environmental, economic, and social sustainability challenges. Sustainable development in this ever-changing business environment is one of the biggest issues for any economy, and it is influenced by the interaction between the key actors of the socio-economic system. The role of businesses in this system, by means of management, entrepreneurship, and innovation, is an important issue of the current sustainability debate across the globe. The quest for businesses, entrepreneurs, innovators, and society now aims to integrate multiple forms of value creation with respect to technical, business, environmental, and social challenges. With some exceptions, management has been slow to develop new theoretical frameworks and relevant tools to aid companies in the sustainability transformation process via innovations in management practice.

Today's business requires paradigm changes and new approaches to sustainable development in business, management and innovation. This special issue on 'Business management, innovation and sustainability in the age of possibilities', aims to resolve the theoretical and practical challenges in making the emerging business management, innovation and sustainability more. Furthermore, this special issue reports about the recent advances in product and service-related innovation and sustainability development, catalyst for sustainable development, ecosystems, education, and accelerators, logistics and supply chain initiatives, and related sustainability initiatives related to the context of business management that promotes the sustainable development into existence.

In this context, this special issue has received a number of submissions, and from that, ten papers have been selected where authorship of papers is from many countries like China, Egypt, Indonesia, Yemen, Vietnam, India, Jordan and UAE after the peer review process followed by the Inderscience *International Journal of Business and Systems Research*.
