Scope of the Journal

Creative computing refers to a meta-technology to coalesce knowledge in computing and other disciplines. IJ CrC highlights creativity in the technological domain to utilise fully knowledge in the human domain while not excluding creativity in the latter. People use computers as aids to creativity and creative-computing topics may reshape the world as we know it. Applications are seen in arts, entertainment/games, mobile applications, multimedia, product/web design and other interactive systems. IJ CrC aims to shape a significant body of creative computing research.

Subject coverage:
Although the possible set of topics is large and we encourage submission on any area within the scope of creative computing, the following areas are particularly suitable (but not exhaustive):

- Creative computing philosophy
- Creative computing theory
- Creative computing principles
- Creative computing modelling
- Creative computing development methods
- Creative computing support environment
- Creative computing applications
- Creative computing evaluation
