Scope of the Journal

ISSN: 1521-0227 (Print), ISSN: 2042-6992 (Online)

IER is an international journal that presents relevant and up-to-date information on environmental issues approached from an interdisciplinary perspective. Manuscripts in IER span the range of traditional disciplines to present a broader, more integrated view of environmental topics without regard to the category restrictions common in traditional academic journals.

Contents:

IER publishes original papers, review papers, case studies, conference reports, management reports, original creative works, and commentaries that foster an interdisciplinary approach to an environmental issue or topic. Special issues devoted to important environmental topics are occasionally published. All papers published in IER have passed a blind review process from both within and outside the principal discipline of the author(s), and are written using a minimum of specialised or technical terms, unexplained formulae, or undefined jargon so as to be understandable and usable by as wide an audience as practicable.

Topics covered include:

- Research of any spatial or temporal scale in interdisciplinary environmental science or study
- Case studies related to interdisciplinary environmental management, ethics, economics, or similar, both local and international
- Comparative studies on environmental topics, including analyses of historic or contemporary environmental issues
- Advances, applications, and consequences of environmental technology, policy, management, or choices approached from an interdisciplinary perspective
- Intersection of socio-political, economic, and scientific forces regarding any environmental topic
- Significance of literature, journalism, and public opinion as pertaining to an environmental issue
- Developments, options, analyses, and issues regarding sustainability and green technology
