

International Journal of

Knowledge Engineering and Soft Data Paradigms

Scope of the Journal

IJKESDP reports the most recent research results in the areas of knowledge engineering and soft data analysis. Knowledge engineering, in contrast to traditional engineering techniques, involves mimicking the performance of human experts in a limited sense. Knowledge engineering with soft data paradigms offers very significant attributes such as learning, autonomy and self-organisation.

Contents

IJKESDP will include original research papers and book reviews. All topics related to knowledge engineering and soft data paradigms will be considered for inclusion in the journal. Special Issues will occasionally be published.

Subject coverage:

Topics include, but are not limited to:

- Advances in soft data paradigms and applications
- Qualitative, quantitative or statistical data analysis, information retrieval
- Clustering, classification, and pattern recognition
- Advances in multivariate data analysis and multivariate data visualisation
- Risk analysis and management
- Hybridisation with other methods
- Ant colony optimisation
- Artificial immune systems
- Cyber security and network security
- Complex adaptive systems, and knowledge-based systems
- Machine learning and reasoning
- Computational neuroscience
- Human-centred computing
- Rough sets
