Scope of the Journal

ISSN: 2050-6902 (Print), ISSN: 2050-6910 (Online)

*Nonlinear dynamics and control systems have enjoyed extensive development in the past three decades, evolving to become multidisciplinary research areas. *IJNDC* is one of the very few journals explicitly dedicated to these two emerging areas. It publishes original research and review articles on theoretical, numerical and experimental works advancing knowledge and multidisciplinary applications of nonlinear dynamics and control systems.*

Topics covered include:

- Control techniques - active, adaptive, backstepping and sliding mode control
- Bifurcations and bifurcating systems
- Chaos, chaotic systems and chaotic circuits
- Classical, modern and digital control systems
- Modelling and experimental investigations of control systems
- FPGA implementation of systems
- Fuzzy logic control
- Hyperchaos and hyperchaotic systems
- Memristors and memristive devices
- Nonlinear dynamical systems
- Nonlinear oscillations
- System identification and analysis
- Systems with stochastic disturbances or fuzzy uncertainties
- Time-delayed nonlinear dynamical systems

Not sure if this title is the one for you?

Visit the journal homepage at www.inderscience.com/ijndc where you can:

- Read about the journal's aims, scope and readership
- View editorial board details
- Find out about calls for papers and how to submit
- Find out about subscription options, in print, online or as part of a journals collection

You can order online at www.inderscience.metapress.com or download an order form from www.inderscience.com/subform.
